

Natural Resources

Renewable and Non-renewable

Renewable resources are natural resources that can be replaced over time despite consumption.

Non-renewable resources are natural resources that cannot be easily replaced by nature at a pace quick enough to match the consumption.

Direction: Cut out the boxes on the right and glue them under the correct headings.

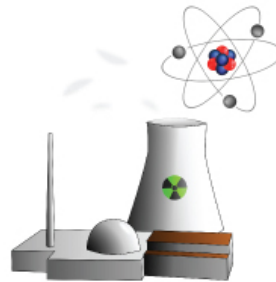

RENEWABLE RESOURCES	NON-RENEWABLE RESOURCES

Natural Gas

Water

Nuclear Energy

Coal

Sunlight

Geothermal Energy

Oil

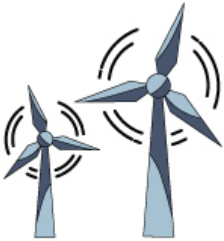

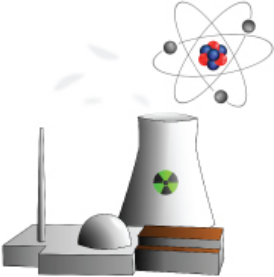

Wind

Natural Resources

Renewable and Non-renewable

Renewable resources are natural resources that can be replaced over time despite consumption.

Non-renewable resources are natural resources that cannot be easily replaced by nature at a pace quick enough to match the consumption.

RENEWABLE RESOURCES	NON-RENEWABLE RESOURCES
 Wind	 Nuclear Energy
 Water	 Coal
 Sunlight	 Oil
 Geothermal Energy	 Natural Gas
